Abstract of JP2002226722

PROBLEM TO BE SOLVED: To provide an organic luminescent material which stably emits red light with high luminance, and a method of production thereof. **SOLUTION:** The organic luminescent material comprises e.g. an aminostyrylphenanthrene compound represented by general formula (I) (wherein R2 is an unsubstituted aryl group; R1 is an aryl group which may have various substituents; and R3 to R5 are each H, a cyano group, a hydrocarbon group, or the like). It is produced by the condensation of a corresponding 4-(N,N-diarylaminophenyl)benzaldehyde with a phosphonic ester or phosphonium.
